

Power BI Data Transformation and Analysis Task

Task: Transform Data

1. Load the dataset into Power BI.
2. Check for data errors and verify data types.
3. Correct any incorrect data types.
4. In the Age Group column, replace 'Teenager' with 'Younger'.

Task: Analyze Data and Generate Charts

1. Find the total number of orders.
2. Calculate the total sales value.
3. Find the total sales of successfully delivered products.
4. Calculate the total sales value of returned products.
5. Identify the top 5 states with the highest number of orders.
6. Analyze order status: number of delivered and returned orders.
7. Analyze purchases made by Men vs Women.
8. Find the number of orders delivered in July and August from Flipkart.
9. Find the total number of orders canceled by 'Younger' age group.
10. Determine the total number of top-delivered M size products.
11. Identify which age group (Adult, Younger, or Senior) has the highest number of orders.
